

OVERALL OBJECTIVES

OBJECTIVES

1. Definition of an OECM

- **a**. Participants' understanding the definition of an OECM (from CBD Decision 14/8) and the criteria of an OECM, as also set out in the IUCN guidelines 'Recognising and Reporting OECMs'
- **b**. Stakeholders understand how OECMs differ from protected areas.

2. International context

Participants' understand the background and justification of OECMs (from Aichi Biodiversity Target 11 and CBD decision 14/8 on 'protected areas and other effective areabased conservation measures')

3. Values and opportunities of OECMs

Participants understand and appreciate the multiple values and opportunities of OECMs as relevant to them, e.g. for consolidating and extending area-based conservation, strengthening local governance, as well as the unique linkages between governance, management and conservation outcomes.

4. Identifying 'potential OECMs'

- a. Participants' understand the difference between a 'potential OECM', a 'candidate OECM' and an 'OECM that has been formally recognised'
- **b**. Participants' are able to use the screening tool to identify 'potential OECMs'

5. Consent and 'candidate OECMs'

- a. Participants' understand the need to obtain consent for a site to become a 'candidate OECM'
- **b**. Participants' are aware of the IUCN 'site level methodology for identifying OECMs'

6. Recognising and supporting OECMs

- **a.** Participants' are aware that OECMs will require a diversity of kinds of recognition and support (legislative, financial, in kind, etc.) and understand the need to engage a range of relevant rightsholders and stakeholders to co-develop means of recognition and support.
- **b.** Participants' are able to produce a first overview of the necessary recognition and support (legislative, financial, in kind etc.) for OECMs for which they have (co-) responsibility, so as to help ensuring their contribution to area-based conservation, improved governance, and enhanced conservation outcomes.

7. Reporting OECMs

Participants' are able to contribute to timely and comprehensive reporting of OECMs to the World Database on OECMs and other relevant databases.

8. OECMs action plans

Participants' are aware of the need to work collaboratively at (sub-)national or sectoral levels to develop action plans to start to recognise, report and support OECMs, and of existing generic planning methodologies that can be adapted to fulfil this need.

Corresponding learning objectives are set out per stakeholder in the matrix of learning objectives.

This project was supported by the German Federal Agency for Nature Conservation (BfN) with funding from the German Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (BMU).
