

THE FISHING BAN AFTER THE FUNDÃO DAM FAILURE

USING THE PRECAUTIONARY PRINCIPLE TO RESTORE FISHERIES IN THE RIO DOCE BASIN

A few months after the Fundão Dam failure in November 2015, the government imposed two different fishing bans in the Rio Doce basin:

Area of fishing ban	Objective	Exception
<p>Minas Gerais state: All Rio Doce basin comprised in the state, including tributary rivers.</p>	<p>To restore the freshwater biodiversity following the impacts of the disaster.</p>	<p>Fishing for subsistence and scientific purposes under certain conditions, exotic species are allowed to be fished in certain amounts.</p>
<p>Espírito Santo state: Ban applied only in the marine areas, from the mouth of the Rio Doce and up to 20 metres in depth between Barra do Riacho (Aracruz municipality) and Degredo/ Ipiranguinha (Linhares municipality). It includes fishes, crustaceans and molluscs.</p>	<p>To avoid public health problems.</p>	<p>Fishing for scientific purposes.</p>

Recommendations

1. Work closely with the Inter-Federative Committee (CIF) to devise a unified decision-making framework and schedule that would permit the removal of fishing bans, including the gathering of freshwater biodiversity and fish toxicity indicators, and an integrated analysis to reflect the concerns of affected parties, regulatory agencies and scientists.

2. Engage women and men fishers as an integral part of the monitoring network to measure the indicators that would permit removal of the fishing bans and the start of a sustainable fishing programme.

3. Communicate the results of the overall assessment on freshwater biodiversity and fish toxicity, and the results of the integrated analysis to affected communities, government authorities and the media.
