Mission statement

To promote conservation of ascomycete fungi by raising awareness that they have vital roles as nutrient recyclers, mutualistic symbionts of animals and plants, and as checks and balances in freshwater, marine and terrestrial ecosystems, and that like animals, plants and other fungi, they are endangered by climate change, habitat destruction, persecution and pollution.

Projected impact for the 2017-2020 quadrennium

By the end of 2020, we plan to have the basic infrastructure within IUCN to enable conservation of ascomycete fungi to be promoted, with global Red List evaluations for at least 150 species. This will in turn mean more Specialist Group members, their training in communication skills and in Red Listing procedures, and greater activity by those members, so that the group is nowhere dependent on a single person. We intend to achieve an increase in awareness of the vital role of fungi first among IUCN personnel, and thereafter in an expanding range of other conservation NGOs, in the public, and among national focal points for the Convention on Biological Diversity.

Targets for the 2017-2020 quadrennium

Assess

Red List: evaluate 150 non-lichen-forming ascomycetes for the IUCN Red List, particularly those with human food value (Toyota Project).

Network

Capacity building: develop a list of essential sources to consult for evaluating species.

Scientific meetings: collaborate with the European Mycological Association and International Society for Fungal Conservation in organising a European-level meeting on fungal conservation in Macedonia in October 2017.

Synergy: appoint a Specialist Group Co-Chair, Red List Authority Coordinator and Programme Officer.

Communicate

Communication: (1) register an Internet domain name for the Specialist Group; (2) establish a Specialist Group website; (3) establish dedicated email addresses for the Specialist Group Chair, Specialist Group Co-Chair, Red List Authority Coordinator and Programme Officer; (4) establish a Facebook account; (5) establish a Twitter account.

Activities and results 2020

Assess

Red List

i. Data gathering and draft evaluations of non-lichen-forming ascomycetes made for 30 of the species planned for 2017, 30 of the species planned for 2018 and 20 of the species planned for 2019, but these not yet transferred to the IUCN system. (KSR #1, 2)

Network

Capacity building

i. A list of essential sources to consult for evaluating species is in use but has not yet been made openly available. (KSR #5)

Communicate

Communication

i. Much of the website structure is now populated with text, but the website is still not live. (KSR #28)

Summary of activities 2020

Components of Species Conservation Cycle: 3/5
