2022 Report of the IUCN Species Survival Commission and Secretariat

The IUCN Species Survival Commission (SSC)

The IUCN Species Survival Commission (SSC) is a science-based network of thousands of volunteer experts from almost every country of the world, all working together toward achieving the vision of “a just world that values and conserves nature through positive action to both prevent the loss and aid recovery of the diversity of life on earth.”

Members of SSC belong to one or more of near 200 Specialist Groups, Red List Authorities, Action Partnerships, Task Forces, and Conservation Committees that make up the Network, each focusing on a taxonomic group (plants, fungi, mammals, birds, reptiles, amphibians, fishes, and invertebrates), national species, or a disciplinary issue, such as sustainable use and livelihoods, translocation of species, wildlife health, climate change, and conservation planning.

Framed by the Species Conservation Cycle, SSC’s major role is to provide information to IUCN on biodiversity conservation, the inherent value of species, their role in ecosystem health and functioning, the provision of ecosystem services, and their support to human livelihoods. This information is fed into the IUCN Red List of Threatened Species.

2021-2025 Species Strategic Plan

The IUCN Species Strategic Plan encompasses the joint work of the IUCN Species Survival Commission and a number of partnerships to achieve more than 2,700 targets proposed by the Network during the 2021-2025 quadrennium.

To accomplish those targets, the Species Conservation Cycle was established, which is the conceptual framework for the Network activities. The Species Conservation Cycle’s main purpose is to guide efforts for valuing and conserving biodiversity through three essential components that are linked to each other:

ASSESS: Understand and inform the world about the status and trends of biodiversity.

PLAN: Develop collaborative, inclusive and science-based conservation strategies, plans and policies.

ACT: Convene and mobilise conservation actions to improve the status of biodiversity.

Their implementation requires two transversal components:

NETWORK: Enhance and support our immediate network and alliances to achieve our biodiversity targets.

COMMUNICATE: Drive strategic and targeted communications to enhance our conservation impact.

SSC Species Report

Annual progress in the implementation of the 2021-2025 Species Strategic Plan is documented in the SSC *Species Report*, which consists of a comprehensive description and analysis of the activities and results generated by the members of the SSC Network each year. Each SSC Group contributes to this document by providing a yearly summarised description of their achievements, which is presented in stand-alone reports.

Structure of the IUCN SSC Stand-alone Report

Stand-alone reports summarize the activities conducted and results generated by each group member of the SSC. Following, is the structure of the stand-alone report and the contents under each session.

Title of the SSC Group

Photograph(s) of the Chair / Co-Chairs

Group information

Includes names of Chair / Co-Chairs, Vice-Chairs, Deputy Chairs, Red List Authority Coordinators and Program Officers, their institutional affiliations, number of members and social networks currently active.

Logo of the SSC Group

Mission statement

Includes the mission of the group.

Projected impact for the 2021-2025 quadrennium

Includes the description of the impact on species conservation resulting from the implementation of the targets formulated by the group for the 2021-2025 quadrennium.

Targets for the 2021-2025 quadrennium

Includes the targets planned by the SSC Group for the 2021-2025 quadrennium ordered alphabetically by component of the Species Conservation Cycle. Each target is labeled with a numerical code (e.g., T-001, T-012) that identifies it in the SSC DATA database and its status for the reported year is indicated (Not initiated, On track or Achieved).

Activities and results

Includes the targets for which activities were conducted and results were generated during the reported year, ordered alphabetically, first by component of the Species Conservation Cycle, and second by Activity Category. Description of activities and results includes the indicator that best describes progress, its associated quantitative or qualitative result, and the narrative description of the activity conducted or result obtained. Each activity or result reported is linked to the Key Species Result to which it is mainly associated (e.g., KSR#1, KSR#5).

Acknowledgements

Includes the acknowledgements to funding agencies, partners, and persons who contributed to the progress of the targets of the group.

Summary of achievements

Summarises information of the group's strategic plan for the quadrennium and progress achieved implementing targets for all the components of the Species Conservation Cycle during the reported year.

Mission statement

The mission of the IUCN SSC Hoverfly Specialist Group (HSG) is to accomplish the Red Listing of European Hoverflies, and in so doing increase current knowledge of the taxonomy, ecology and distribution of European Hoverflies, promoting their long-term conservation.

Projected impact 2021–2025

We expect the completion of both the Red Listing of all Europe's Hoverflies in late 2022 and the Assessment-to-Plan document to have significant impact in the conservation of Hoverflies, identifying critical sets of species on which Europe-wide conservation efforts can be targeted, and promoting the inclusion of Hoverflies in pollinator conservation planning and education.

Targets 2021–2025

ASSESS

T-002 Assess a selection of 650 European Hoverfly species.

Status: Achieved

T-004 Assess globally all species currently listed on existing national or regional Red Lists.

Status: Not initiated

T-005 Identify new Key Biodiversity Areas (KBAs) according to IUCN standards.

Status: Not initiated

PLAN

T-003 Develop guidelines for the conservation management of Syrphidae habitats.

Status: Achieved

T-007 Develop conservation strategies for threatened Syrphidae.

Status: Not initiated

ACT

T-006 Stimulate research on the distribution of particular species and the threats affecting them.

Status: Not initiated

NETWORK

T-008 Develop a network of institutions and individuals dealing with Hoverflies.

Status: Not initiated

COMMUNICATE

T-001 Promote awareness about Hoverflies through specialised and general social media.

Status: On track

Activities and results 2022

PLAN

Planning

T-003 Develop guidelines for the conservation management of Syrphidae habitats. (KSR 8)

Number of Assess to Plan (A2P) species assessments completed: 1

Result description: The A2P publication was published in late 2022. Publication: IUCN SSC HSG/CPSG (2022). 'European Hoverflies: Moving from Assessment to Conservation Planning. A report to the European Commission by the IUCN SSC Conservation Planning Specialist Group (CPSG) and the IUCN SSC Hoverfly Specialist Group (HSG)'. *Conservation Planning Specialist Group*, Apple Valley, MN, USA.
