IUCN World Conservation Congress - Hawai'i 2016

Held once every four years, the IUCN World Conservation Congress looks to bring together change-makers from across the world, representing the brightest minds in academia, government, business, indigenous peoples and civil society to find innovative solutions for our planet. The IUCN World Conservation Congress therefore provides a unique and well-timed opportunity to add to the historic agreement at the UNFCCC COP Paris and will serve to mobilise action.

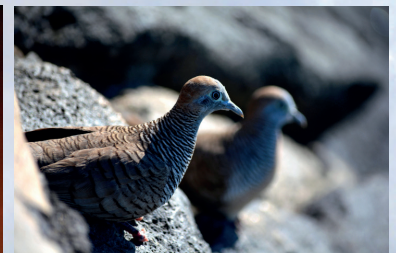

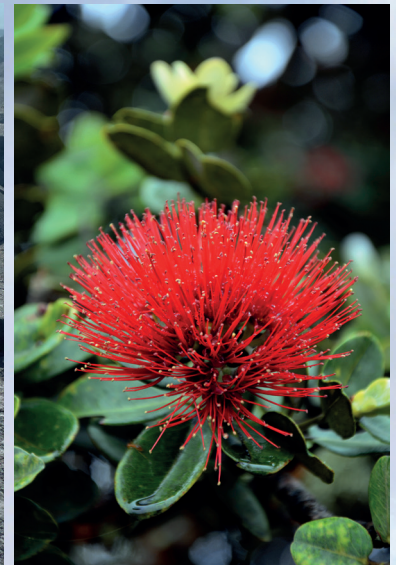

The theme of this year's Congress is "Planet at the crossroads", highlighting the necessity for urgent change and the importance of making the right decisions now that will affect our planet and future generations. Instead of succumbing to a pessimist narrative, IUCN chooses instead to insist that we are ready and able to take on this important challenge and make great change together.

We are very lucky to have inspiring marine conservation heroes in attendance, including the author of this year's editorial, Sylvia Earle, an IUCN Patron of Nature and the founder of Mission Blue. Her presence, among other amazing attendees at this year's Congress, will create an atmosphere of excitement and possibility that will set the scene for successful decision-making.

If you'll be in beautiful Hawai'i, please join us at our Oceans & Islands Pavilion, which will be organised around three key themes:

- *Marine Protected Area Networks*
- *Islands & Overseas Territories*
- *Financing & Blue Economy*

We will explore the issues facing our oceans, islands and our poles today and provide a space where interested individuals and professionals can mingle and discuss solutions for the future.

Oceans Warming Report to be released at Congress

The IUCN Congress marks a unique opportunity to bring together change-makers to develop collaborative solutions to benefit the health of our planet. At this year's Congress, IUCN will release a landmark publication on ocean warming that is the most recent and comprehensive report ever published on the subject.

Bringing together 80 scientists from 12 countries, this report seeks to provide a comprehensive analysis on the impacts to the ocean from absorbing more than 93% of the enhanced heating from the greenhouse effect and other human activities since the 1970s.

The report delves deep into this issue, analysing the impacts on ocean ecosystems, species and even the deep remote ocean. It reviews the impacts and effects of ocean warming on specific seas and ecosystems ranging from micro-organisms up to marine turtles and mammals. The report also examines the impacts on ecosystem services.

The report provides analysis of the existing and likely future economic consequences, including on the weather, the protection of coasts and on the contributions of fisheries and aquaculture. The report also importantly reviews potential risks to human health and well-being.

Finally, the report finishes by detailing what changes are currently underway and what we can expect from the future, with some key recommendations. It should be used to contribute to further discussion and thought on this subject, in particular at high-levels such as in the Intergovernmental Panel on Climate Change, as well as for use by governments, agencies and experts worldwide.

Ensuring the resiliency of our oceans is vital to the planet's survival. Please join us for subsequent important discussions on this report and issue in the Oceans & Islands Pavilion and at other events during the Congress.

2015

was the warmest on record

120 years

since we found out about global warming

>93%

of the enhanced heating since the 1970s due to the greenhouse effect has been absorbed by the ocean

The upper **700m**

of the ocean contains the same heat content as ~240 times the global energy consumption in 2013

Ocean warming results in a loss of

OXYGEN

in water, due to reduced solubility, impacting Ecosystems.

2.5Gt

of frozen methane hydrate are stored in the sea floor

Floor Plan Map

Note: KAKAKUA BALLROOM is located on the 4th Floor.

IUCN Marine Team & Partners in Hawai'i

The IUCN Global Marine & Polar Programme comprises of 40 staff working in 9 countries on ten broad themes: Climate Change Mitigation & Adaptation, Coastal Livelihoods, Conserving Threatened Species, Energy & Industry, Fisheries & Aquaculture, Marine Plastics, Coral Reefs, Polar Conservation, Marine Protected Areas (MPAs) and Ocean Governance.

Carl Gustaf Lundin
Director, Global Marine and Polar Programme
IUCN Headquarters Gland, Switzerland.
Carl.Lundin@iucn.org

Olivia Meylan
Administrative Assistant
IUCN Headquarters Gland, Switzerland.
Olivia.Meylan@iucn.org

Dan Laffoley
Principal Advisor, Marine Science and Conservation
Peterborough, UK
DanLaffoley@btinternet.com

Carole Martinez
Programme Coordinator, Regional Seas/EU
Overseas
IUCN Headquarters Gland, Switzerland.
Carole.Martinez@iucn.org

Alexis McGivern
Junior Professional
IUCN Headquarters Gland, Switzerland.
Alexis.McGivern@gmail.com

Professor John Baxter
Principal Advisor
Marine, Scottish Natural Heritage
Edinburgh, Scotland
J.Baxter4@btinternet.com

James Oliver
Programme Operations Officer
IUCN Headquarters Gland, Switzerland.
