- ✓ Highly interactive, practice oriented.
- ✓ Including field trips, peer reviewing, best practice exchange and updates on state-of-the-art knowledge and initiatives.

The URBES project, the leading European science-policy network on urban biodiversity and ecosystem services, is hosting a series of unique training sessions in 2013 / 2014.

This first of three training sessions will offer a unique opportunity to gain knowledge on the latest science of the values of urban biodiversity, which will be immediately applicable in ongoing city development processes.

The 2.5 days interactive training session will focus on the monetary and non-monetary valuation of ecosystem services in the urban environment. It will bring together European top scientists and practitioners to share the latest knowledge and best practices in the field.

Participants will gain in-depth knowledge about an ecosystem services-based approach to management, and its values for integrated and sustainable urban development. It will also increase the understanding of ecosystem valuation tools and methods.

URBES is a three-year research project funded by BiodivERsA that aims to bridge the knowledge gap on the links between urbanization, biodiversity and ecosystem services. It informs urban managers and decision-makers on how to best integrate the natural environment and human needs. The project consortium consists of world-leading research institutes on sustainable urban development, based in Europe and the USA (New York).
